# Architecture as a Service

A technology solution is only as strong as its foundation. Building a scalable foundation for digital initiatives requires the right architects with the right experience to bring together the right teams and tools to work harmoniously.

EVOTEK's Architecture as a Service solution is a starting point for businesses looking to bring the best resources to design and deploy a foundation for success. Our practitioners have the real-world experience and the right skills to drive technical initiatives to new heights.

## Business Challenge

The pace at which companies are required to evolve is only gaining speed. Considering the velocity in which the technology landscape is evolving, ensuring that technical solutions are appropriately designed from the ground up with the ability to scale is a challenge every business is facing. Couple this with the challenge of finding talent appropriate to deal with a rapidly evolving world, and it's clear why many companies are simply unsure where even to start. Most businesses struggle to find the right resources who have experience in next-generation projects, who can help accelerate their projects or provide a process to pursue new projects quickly.

Whether starting a new initiative from the ground up or rebuilding a solution that has collapsed due to a faulty foundation, EVOTEK's Architecture as a Service can aid in approaching these initiatives. Our offering spans design to delivery, bringing the right talent to the table to drive reliability and results, ensuring a foundation for success.

## A Proven Solution

This offering helps clients compete in the age of rapid and efficient execution by eliminating or reducing functional silos and providing high-demand, highly-skilled architects who can help avoid the common pitfalls of driving these more significant and impactful digital initiatives.

By leveraging resources that have led projects that span next-generation software development, hybrid cloud, and security, clients can achieve integrated solutions instead of being constrained by operating in silos.

The Architecture as a Service offering can help businesses understand their security posture, provide a prioritized roadmap for compliance remediation, and aid in security breaches, from advisory to architecture.

## Solving Challenges in Healthcare

Privacy regulations continue to play a vital role in healthcare challenges as patient data now spans geography and across clouds. In addition to innovating, trying to limit exposure to both privacy breaches and new security threats have been a significant challenge for our clients that our offerings have helped solved.

Our Platform and Security Architects were able to design and deploy the right foundation to resolve scaling and security issues due to new demands on the business. By ensuring interoperability between systems easing integration issues, EVOTEK ultimately solved significant business challenges around time, cost, security, and deployment risk.
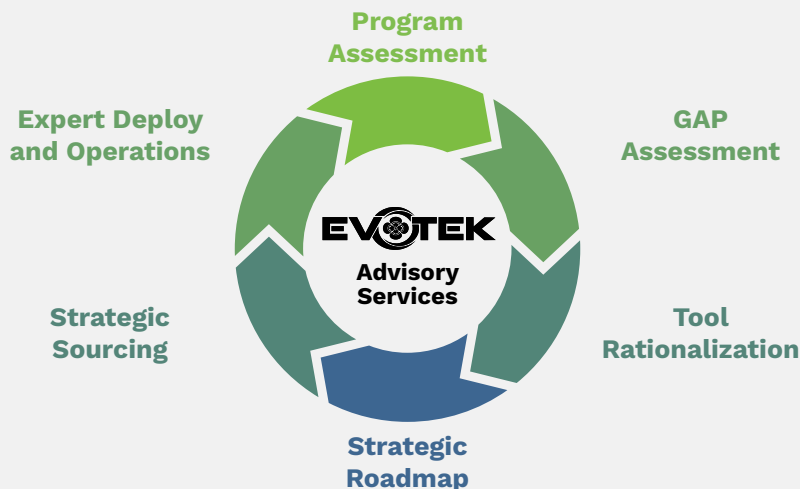

## An Integrated Strategy

EVOTEK provides cross-functional solutions with offerings that span an integrated set of technical domains. By working between the business and IT we can facilitate alignment, reduce functional silos, and focus on business objectives not internal politics. Our integrated technical domains provide a cohesive approach to digital initiatives while driving business impact. EVOTEK provides a clear path for clients looking to bring their various teams together to execute an integrated solution with Security at the core.

## The EVOTEK Approach

EVOTEK is uniquely equipped to enable customers while driving business results. Our approach aligns the organization by encouraging cross-team engagement between the business, technology, regulation, and more. By providing this stakeholder visibility, clients see less siloed activity, reduced toolsets, less shadow IT, better resource utilization, and a more efficient workforce.

With a comprehensive framework built to solve today's business needs, EVOTEK brings a thorough, full-service approach to advisory services. Whether you need to begin with a Program Assessment or a Strategic Roadmap, EVOTEK can provide the rapid and efficient execution required to compete in today's transformation climate.
