

Microsoft Engineering Subscription

Keep up with exploits, patch vulnerabilities, and maintain operational efficacy

The EVOTEK Microsoft Subscription Service is designed to maximize your investment in supporting tasks within your Microsoft technology stack. Our engineers understand the adjacencies to other technologies and provide expert advice regarding these integrations as well as technical configurations. The Microsoft Subscription Service helps offload much of the difficulty keeping up with vulnerabilities and exploits that are frequently identified and require constant patching, maintenance, and at times redesign work.

Business Challenge

The problems businesses often face surrounding Microsoft technologies are legion. It is well known that there is a shortage of qualified Microsoft professionals in the marketplace today, making battle-hardened Microsoft engineers extremely difficult to hire and expensive when you can. Microsoft's own research suggests that half a million security roles alone will be unfilled by 2025. With these market conditions, the cost to maintain, update, upgrade, secure, and generally operate your fleet of Microsoft technologies is only going to increase in the coming years. A multitude of factors combine in most businesses to produce a significant amount of technical debt surrounding the Microsoft stack that must be remediated or transformed to modern technologies and methods to responsibly operate for most organizations.

A Proven Solution

Subscription services will need to start with a discovery of the environment and a health check as well as sessions with key stakeholders to determine if the current system configuration is meeting client requirements. After discovery, we will be able to specifically measure and demonstrate the value of the rest of the subscription. Most environments will move into a technical debt relief phase (the transformation phase) surrounding the client's specific technical debt exposure in a highest priority manner. This stage is where Microsoft technologies will be updated and configured to meet EVOTEK's best practices for subscription management. After the transformation phase, we will naturally move into the subscription management phase, offloading much of the Microsoft related work your resources face.

Avoiding Technical Debt

EVOTEK recently helped a client that had accrued significant technical debt around their Microsoft based services because they simply didn't have the skills on-staff to keep them updated. EVOTEK was able to fully update all Microsoft server-based services and avoided new current vulnerabilities from findings on the clients internal penetration test.
