

FinOps Assessment

Get control of your organization's cloud costs without sacrificing agility

All organizations that use cloud face challenges in cost management. 82% of IT Decision Makers rank “managing spend” as their top cloud challenge. EVOTEK helps organizations implement a cost operation model in line with industry best practices. The goal is to enable the organization to manage costs while maintaining business agility and our assessment helps you get on the right path with cost visibility, forecasting, management, and budget control.

Business Challenge

Leaders waste countless hours manipulating spreadsheets to accurately report cloud spend while navigating confusing commitment options and licensing complexity across multiple cloud vendors. It is also difficult to get buy-in from across the organization for cloud optimization, as engineering, finance, and business teams all have different priorities.

As a result, organizations pay more for cloud than expected, experiencing “bill shock” and innovation slowdown. They find themselves needlessly paying for underused or oversized resources, and unless they can navigate a myriad of cloud purchasing vehicles and commitment opportunities across multiple vendors, they pay a higher rate than necessary for the resources needed. Our FinOps Assessment helps businesses use only what they need, pay less for what they use, and identify quick wins for immediate savings.

A Proven Solution

The EVOTEK FinOps Assessment offers key insights to optimize multi-cloud spending. Our one-week assessment reveals current spend, estimates savings, and outlines clear steps for cost efficiency.

- **Analyze current cloud billing statements.** Get a high-level of view of your cloud spend by business group, product, or resource
- **Identify opportunities to optimize rates and usage.** Estimate potential savings, and identify near-term actions to capture savings
- **Review current reporting and tagging structure.** Identify opportunities for to better align cloud spend to business outcomes
- **Evaluate current tools and processes.** Compare to industry-standard best practices. Identify near-term opportunities for improvement

At the end of assessment, EVOTEK will provide a high-level map of current cloud spend, near-term opportunities to reduce spend, and a road-map for building a FinOps practice.

How EVOTEK Delivers Results

EVOTEK is uniquely equipped to enable customers while driving business results. Our approach aligns the organization by encouraging cross-team engagement between business, technology, and regulation. By providing stakeholder visibility, clients see less siloed activity, reduced duplication of work, better resource utilization, and a more efficient reporting framework. With a comprehensive framework built to solve today's business needs, EVOTEK brings a thorough, full-service approach to advisory services. As a result, EVOTEK can provide the rapid and efficient execution required to compete in today's transformational climate.
