

# Internet Connectivity Optimization

Consolidate your vendors and ensure maximum cost-savings for your communications needs

From sourcing to installation, managing network connectivity is a complicated and time-consuming area of business. It can become an even bigger project with the more sites you manage. EVOTEK can assess your current connectivity performance and from there, design a network that maximizes utilization and performance. In addition, working with multiple carriers can be noisy, financially impractical, and keep you from implementing the right solutions for your business and technology needs. EVOTEK can be your advocate.

## Business Challenge

There is a complexity to connectivity that EVOTEK aims to solve. With so many options available for carriers, it is hard to determine which is the right choice and which one has the support mechanisms that align with your business needs. Beyond choosing a carrier, you then face the challenges of outages absorbing ample resources and time. For businesses operating with an outdated MPLS, this can also limit your options with carriers and connection type, which is not the most current way to optimize your edge in the end-user community. By moving off legacy connectivity to DIA, you can allow other projects to optimize the network while simultaneously reducing costs.

## A Proven Solution

EVOTEK's [free](#) Connectivity Assessment allows visibility into current carrier options, pricing, delivery time frames, and service levels. Our team handles all project oversight, can package, and negotiate with carriers, and with access to partner wholesale pricing, can significantly reduce your costs.

A lifestyle company was facing multiple outages that were impossible to manage and 250 locations that all had different network designs and carriers. EVOTEK was able to save them 20% on their costs, standardize their design including SD-WAN, and increase their bandwidth to every site. There have been zero outages in a 90-day stretch and counting.

The company also wanted a singular DIA and an affordable backup option and EVOTEK and Fastblue Communications were able to partner and deliver this and more. This has resulted in more uptime for the members as well as the employee experience via point-of-sale machines and reservations.

## Partner Spotlight

Fastblue Communications provides streamlined, simplified global connectivity. They provide consistency across sites through single-source solutions, delivering a uniform experience and removing dependency on local ISPs. Through centralized management, they eliminate the complexity of dealing with numerous suppliers and contracts. They also host 24/7 NOC with proactive site monitoring to ensure true end-to-end network management.

Most importantly, by partnering with Fastblue, we can leverage their global spend and increase buying power by joining their millions of dollars in carrier spend. Through this partnership, you can significantly reduce your costs.
