LEVOTEK Labs

Play of the Month

Challenge

Organizations struggle to balance risks from the onslaught of AI tools with the potential opportunities gained by proper usage.

Outcome

Broaden relationships within your account as a trusted advisor while selling new services that truly differentiate.

Generative AI offers extraordinary opportunities to redefine creative boundaries in writing, coding, image creation, and audio synthesis. Yet, these advancements bring challenges around intellectual property protection, accuracy, code ownership, and detection. Organizations face an uphill battle trying to limit the risk exposure of Generative AI usage, and are often blind to the extent which Generative AI tools (i.e. OpenAI ChatGPT, GitHub Co-Pilot, Midjourney) are already utilized by employees today. EVOTEK's AI Roadmap helps customers build internal programs to best leverage AI opportunities while mitigating AI risk.
